PORTFOLIO

Jens Vanderseypen

JENS VANDERSEYPEN

Profile

A creative, ambitious, and driven person looking for job opportunities in the architectural field that combine the creative and artistic aspects of the craft with the pragmatic, problem-solving mindset of the engineering field. I have a particular interest in both the historical and digital aspects of architecture, especially when combined, such as through the use of Building Information Modelling for historical research. Having spent part of my youth abroad, I have a keen interest in international projects that allow me to come into contact with other cultures.

In this portfolio, I'll be presenting the various designs I've created throughout my education, not merely through the plethora of design courses offered by KU Leuven, but also through the work experience I was able to accrue abroad during my internship in Dubai with the BESIX Group. Additionally, I will be showcasing my experience with Historical Building Information Modelling for research purposes.

Education

Primary School Jan. 2012 - Jun. 2014
Raha International School, Abu Dhabi
A brief period abroad, from my fourth year of elementary school to my first year of middle school, during which I came into contact with students from a variety of backgrounds and learned to adapt to a radically different educational system in another language.

Bachelors Degree Sept. 2020 - Jun. 2024
KULeuven, Leuven
Forming a satisfying synthesis between the creative and engineering aspects of architecture, this course allowed me to explore the various avenues of the field. Through this exploration, I have found that my interests align most closely with the creative design and computational aspects of architecture.

Masters Degree Sept. 2023 - Jun. 2026
KULeuven, Leuven
Specialisation: Masters in Architectural Design
After completing my Bachelor's degree, my Master's degree allowed me to further explore the aspects of architecture that I am most passionate about, with a focus on the scale of the individual building rather than the urban scale. Additionally, this degree allowed me to further investigate the use of digital methods in historical research.

Thesis Sept. 2025 - Jun. 2026
Professor Merlijn Hurx + Collaboration with Studio Roma
Een digitale reconstructie van de Abdij van Park te Heverlee

Personal Info

Date of Birth
November 7, 2002

Nationality
Belgian

Languages

English
Fluent

Dutch
Fluent

French
Basis

Software

- Adobe Illustrator
- Adobe InDesign
- Adobe Photoshop
- ArchiCAD
- Navisworks
- Revit
- Sketchup
- Vectorworks

Work Experience

BESIX Internship
BIM Assistant
Six Construct, Dubai & Abu Dhabi
During the first semester of the second year of my Master's degree, I was given the opportunity to undertake an international internship at Six Construct, the Middle Eastern subsidiary of BESIX. I mainly assisted with clash detection and control within the models, as well as with the annotation of plans for projects such as OXAGON in Saudi Arabia and Tour Triangle by Herzog & de Meuron in Paris. I was also given the opportunity to work on site at the Zayed Museum in Abu Dhabi, designed by Foster + Partners.

Digital Reconstruction Prinsenhof
Historical researcher & BIM Modeller
KULeuven, Leuven, Professor Merlijn Hurx
Building on a course from the previous semester, I researched the available documentation on the wooden roof structure of a presumably never-built wing of the Prinsenhof in Brugge. Alongside a fellow student, I then modelled the structure using BIM software to further test the plausibility of our proposed designs. These findings were presented at a conference in Cambridge and are currently being developed into a paper by Professor Merlijn Hurx.

Digital Reconstruction Chapel Binche
Historical researcher & BIM Modeller
KULeuven, Leuven, Professor Krista De Jonge
Developed as part of the Mary4All project, this proposed BIM model of the chapel in the Binche Palace, designed by Jacques Du Broeucq, was intended for acoustic testing of the chapel complex. My model was also used to explore the presumed architectural configuration and ornamentation, mainly of the interior of the complex.

FACTREE II 5

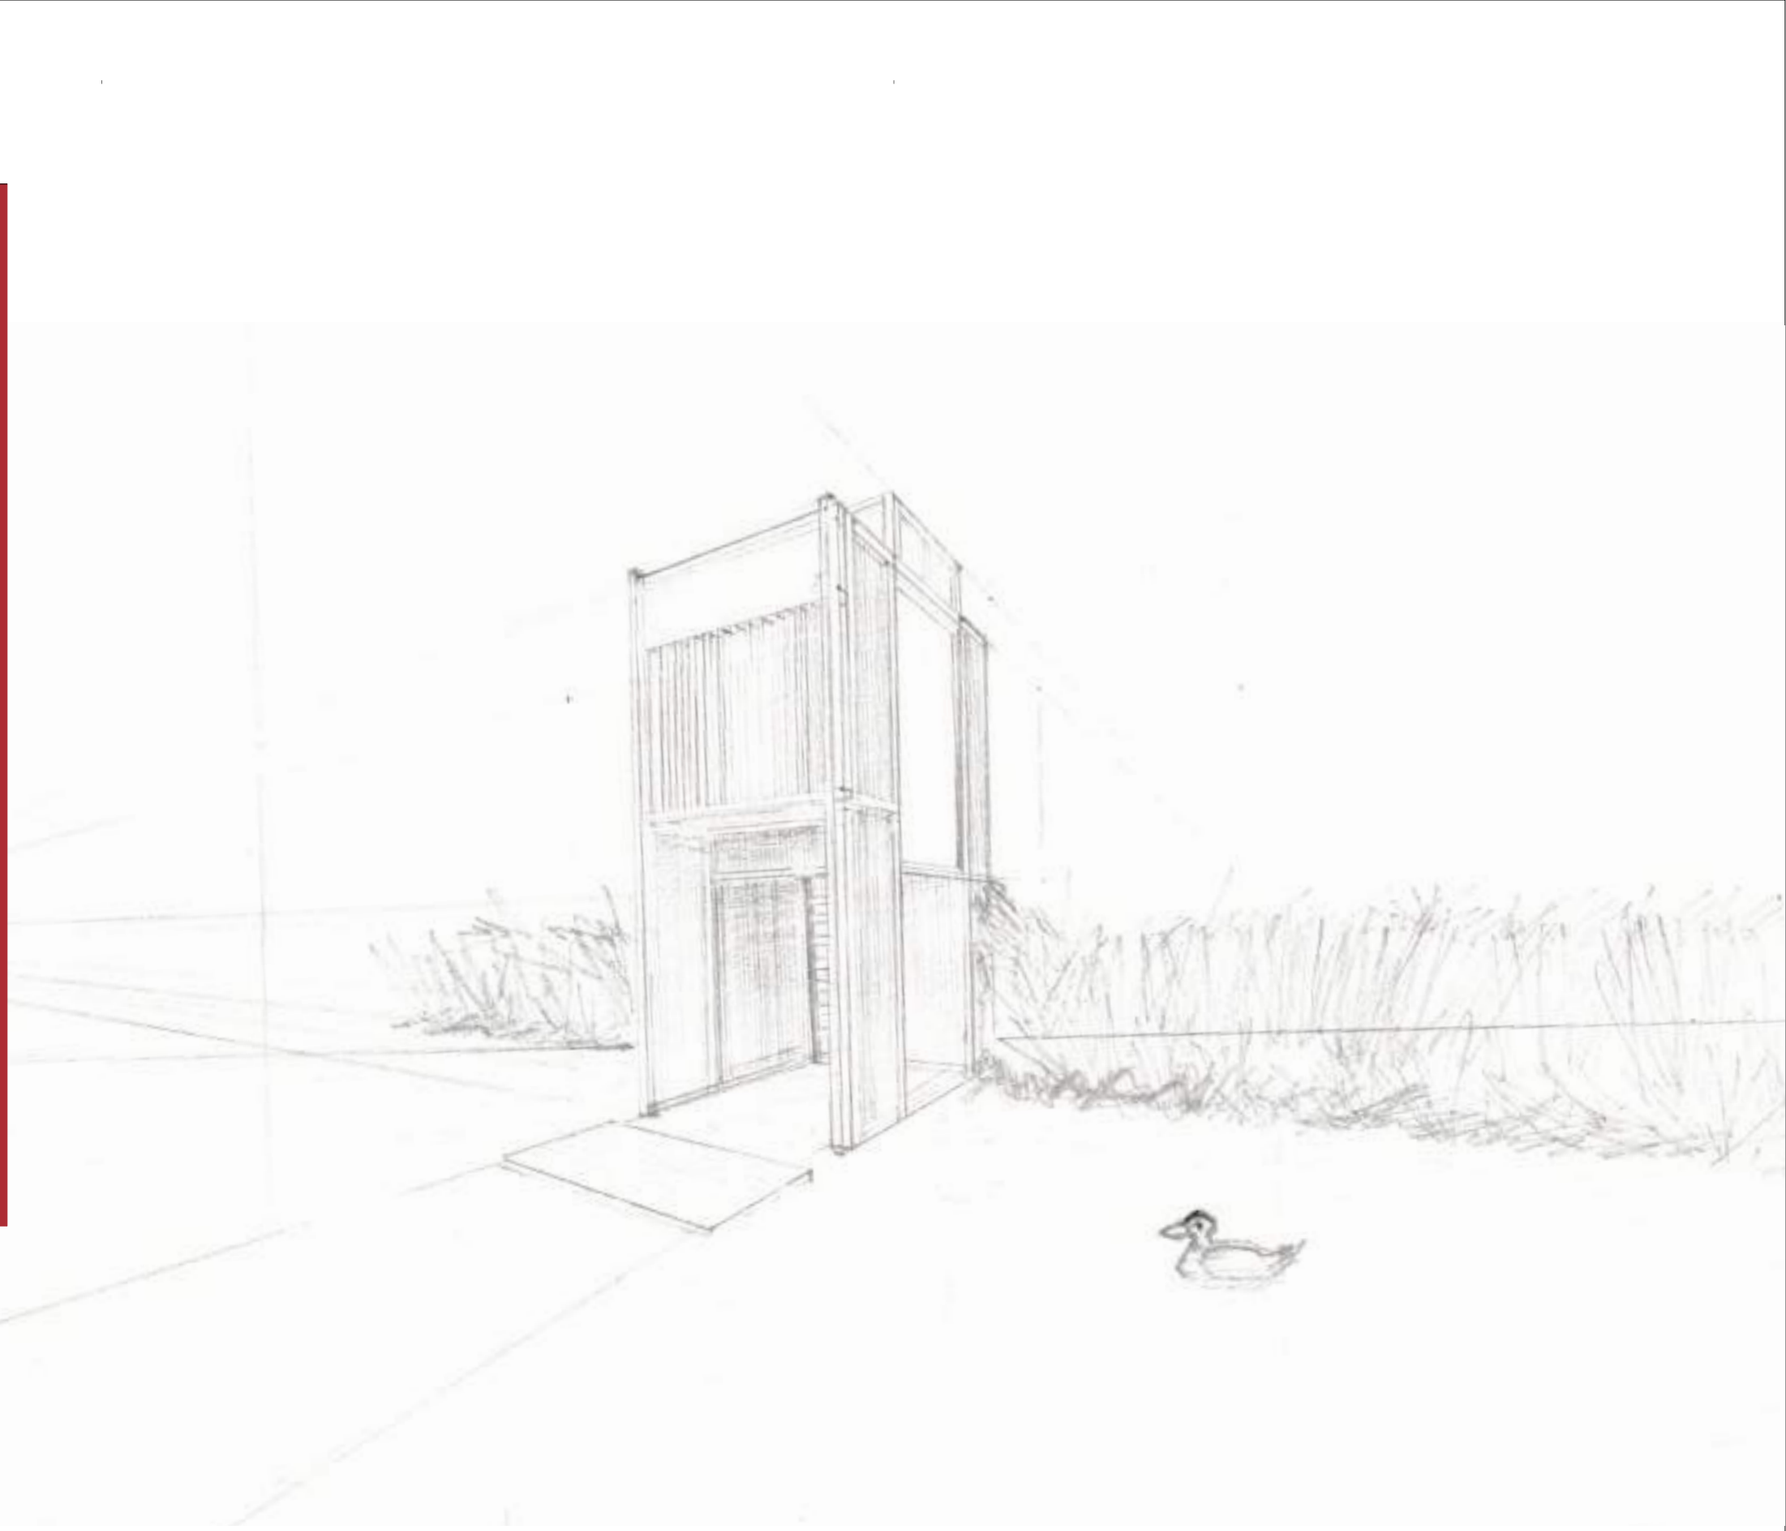

STÜVO 6

The following pages will go over a few of the designs I've created over the years. This showcase is not meant to be a detailed dive into every project, but more so a showcase of my evolution through the various types of projects I've had the opportunity to work on.

Each project will be presented in chronological order, first providing an overview of the entire project before diving into the design process through sketches, floor plans, etc. Lastly, we'll explore the execution of the different projects through renders, maquettes, and detailed drawings.

Crossing (Earlier project)
Location: Leuven
Year: 2020
